State College, PA

Courtyard Marriott
Thursday, April 30, 2009
8:30 AM – 4 PM

In times like these, it is all the more important to identify new ways to develop business and save money at the same time. Your customers and potential customers are watching their budgets closely. They want to save money now and identify ways to cut their future energy costs.

The Variable Refrigerant Flow Systems offer ways to accomplish all that. While VRF is the standard worldwide, these systems are perfect for growth opportunities at your U.S.-based business. VRF systems offer improved installation (lightweight and modular—they fit in a standard elevator), design flexibility, lower cost and easier maintenance, multi-zone comfort, and energy efficiency (VRFs virtually eliminate duct losses).

“Comfort Supply’s training was very informational and well-taught. Being able to design a system using Design Tool by the end of the class was just amazing and presented a new way of looking at HVAC projects.”

—Jim Rykowski, Cattrell Companies, Toronto, OH

**All materials
INCLUDED.
Breakfast and lunch
PROVIDED.**

Maximize the experience
—bring a laptop.
Not required, though.
